```
=== Ambulance Shortest Route using Dijkstra's Algorithm ===
Enter number of locations (junctions/hospitals): 6
Enter unique location names (one word each):
Location 1: j1
Location 2: j2
Location 3: j3
Location 4: j4
Location 5: j5
Location 6: hospital
Enter number of roads: 8
Enter each road as: location1 location2 distance
Road 1: j1 j2 4
Road 2: j1 j3 2
Road 3: j2 j3 1
Road 4: j2 j4 5
Road 5: j3 j4 8
Road 6: j3 j5 10
Road 7: j4 hospital 2
Road 8: j5 hospital 3
Enter ambulance starting location: j1
Enter destination hospital: hospital

Shortest route for the ambulance:
j1 -> j3 -> j2 -> j4 -> hospital
Total distance: 10 units

--------------------------------
Process exited after 254.7 seconds with return value 0
